Department of Computer Science and Engineering
CO3_AT1 — EXPERIMENT

Course Code:	DSA0606	Course Title:	Data Handling and Visualization
CO Assessed:	CO3 – Construction (BL3)	Assessment:	Assessment Tool 1 – Experiment
Weightage:	20% of CIA	Total Marks:	25 (5 Questions × 5 Marks)
CO3 Statement:	<i>Apply appropriate experimental charting techniques — pie charts, bean plots, violin plots, box plots, and stacked bar charts — to construct accurate visualizations from given data. (BL3)</i>		
Student Name:	P.Vishwa Nandan Reddy	Reg. No.:	192473015
Section / Batch:	2024	Date:	11-08-2026

Code of Conduct

I P.Vishwa nandan (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: vishwa

Instructions

- This test contains 5 questions, each carrying 5 marks. Total: 25 Marks.
- No negative marking. Unanswered questions carry zero marks.
- No calculators or electronic devices permitted.
- Duration: 75 minutes.
- Graph paper or a ruler is recommended for accurate, to-scale drawing.
- Show all calculations (e.g., pie chart angles, five-number summary, IQR) as part of your answer.
- Every chart must include a title, correctly labeled axes (where applicable), and a legend where relevant.

Annexure A – EXPERIMENT

Rubrics for Calculation **ASSESSMENT RUBRIC**

AT1 — Experiment

CO3 · BT3: Apply ·

This rubric is used to assess student responses to the CO3-AT1 Experiment, in which students are given a small dataset and must construct an accurate pie chart, bean plot, violin plot, box plot, or stacked bar chart.

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Concepts	25%	Demonstrates thorough, accurate understanding of the correct chart type (pie, bean, violin, box, or stacked bar) and the elements required to construct it for the given data.	Good understanding of the required chart type and construction elements, with only minor gaps.	Basic understanding of chart construction, but with some misconceptions about the correct chart type or required elements.	Poor understanding of core construction concepts; selects a chart type fundamentally unsuited to the data.
Explanation	25%	Shows detailed, clearly worked calculations (e.g., pie chart angles, five-number summary, IQR, stacked totals) and explains each construction step.	Shows clear calculations and construction steps, with adequate explanation for most parts.	Calculations or construction steps are shown but incomplete, or explanations are superficial.	Little or no working shown; calculations and construction steps are missing or unexplained.
Application	20%	Effectively applies chart construction techniques to produce a complete, accurate chart correctly matched to the data.	Applies construction techniques to produce a correct chart, with only minor errors.	Limited application of construction techniques; the chart partially represents the data but has notable errors.	Fails to apply appropriate construction techniques; the chart does not correctly represent the data.
Organization	15%	The chart is	The chart is well	Basic	Poorly

		neatly and logically constructed, with a title, correctly labeled axes or slices, a legend where applicable, and elements in a clear order.	organized, with only minor issues in labeling, legend, or layout.	construction; required elements (title, labels, legend) are present but poorly arranged or partly missing.	constructed; the chart is missing key elements such as a title, labels, or a legend.
Accuracy	10%	The chart is completely accurate — all values, proportions, quartiles, and calculations correctly match the given data.	Mostly accurate, with only minor omissions or a small error in one value or calculation.	Partially correct; some plotted values, proportions, or calculations are missing or incorrect.	Largely inaccurate; major errors in plotted values, proportions, or calculations relative to the given data.

Scoring Guide

For each criterion, award a performance level (1–4) based on the descriptors above. Multiply the level achieved (as a percentage of 4, i.e., Level 4 = 100%, Level 3 = 75%, Level 2 = 50%, Level 1 = 25%) by the criterion's weightage, then sum across all five criteria to obtain the total score out of 100%.

Problem 2

Code:

```
budget <- c(40, 25, 15, 20)
labels <- c("Rent", "Food", "Transport", "Savings")

pie(budget,
    labels=paste(labels, budget, "%"),
    main="Monthly Household Budget")
```

Output:

Problem 8:

Code:

```
install.packages("beanplot")
library(beanplot)

temp <- c(22,24,23,27,29,26,25,24,23,28)

beanplot(temp,
    main="Daily Temperatures",
    ylab="Temperature (°C)",
    xlab="Days")
```

Output:

Problem 14

Code:

```
library(ggplot2)
```

```
weight <- c(2,3,3,4,4,4,5,6,7,10)
```

```
ggplot(data.frame(weight), aes(x="", y=weight)) +  
  geom_violin() +  
  labs(title="Package Weights",  
        x="", y="Weight (kg)")
```

Output:

Problem 20

Code:

```
rain <- c(10,15,20,22,25,28,30,35,40,45,90)
```

```
boxplot(rain,  
        main="Monthly Rainfall",  
        ylab="Rainfall (mm)")
```

Output:

Problem 21

Code:

```
x <- matrix(c(60,40,20,30), nrow=2, byrow=TRUE)
```

```
barplot(x,  
        names.arg=c("Science", "Commerce"),  
        col=c("skyblue", "pink"),  
        legend.text=c("Boys", "Girls"),  
        main="Students by Department and Gender",  
        ylab="Number of Students")
```

Output:
